

CLEAN-SEAL[®] 2

Plug it...*Fill it*...Drain it!

The Clean-Seal[®] 2's new patent-pending design adds the ability to plug, fill and drain a DWV system from any PVC, ABS or cast iron tee.

Cherne has added Clean-Seal 2 to their broad offering of DWV test products. Trusted by the trade as the best in the business, Clean-Seal 2 offers the same reliable features as the original Clean-Seal with the ability to test the DWV system with either air or water. No longer fill a DWV system from the stack or use other complicated multi-piece products.

Features:

- Patent pending design.
- Plug, fill and drain from same cleanout tee.
- Multi-lobe gasket allows sealing of all tees including cast iron.
- Hand-tighten in place, no tools required.
- Rubber cap protects hose connection when not in use.
- Check-valve allows removal of hose after filling system and keeps DWV water from back-filling into potable lines.
