### Ground-Fault Circuit Interrupters (GFCI)Ⓢ

Provides Class A (5mA) ground fault protection. Intended for personal protection. De-energizes the circuit for all ungrounded conductors of the circuit.

### Ground-Fault Equipment Protection (30mA)Ⓢ

Provides protection of equipment from damaging line-to-ground faults currents. De-energizes the circuit for all ungrounded conductors of the circuit.

### Branch-Feeder Arc-Fault Circuit Interrupters (AFCI)

AFCI's detect arcing faults (an unintentional arcing condition in a circuit) that standard circuit breakers are unable to detect. The device is intended to mitigate the effects of arcing faults by functioning to de-energize the circuit when an arc-fault is detected. Branch-feeder AFCI detects line-to-ground and line-to-neutral arcs.
